

# Sterile Vial Wipes

## Knitted and nonwoven polyester with 70% IPA

Contec can provide a choice of small, sterile, presaturated wipes ideal for the wiping of vial tops, or other applications where a large volume but small wipes are needed.

Contec Sterile Vial Wipes are made from either 100% knitted polyester or a more economical nonwoven polyester presaturated with a blend of 70% IPA and Deionised water.

Both wipes generate a low level of particles and fibres, knitted polyester lower amounts than the nonwoven wipe.

There are 20 knitted wipes per pouch (10 x 10cm) or 60 nonwoven wipes, which are ideal for wiping the top of vials prior to piercing the septum for reconstitution or use. These small high quality wipes can be used in place of sterile individually wrapped alcohol prep wipes which generate significantly more waste and particles in the product contact area.

The low-profile peel and reseal cleanroom-compatible packaging provides both quick access and easy closure, and requires minimal space in the isolator or UDAF cabinet.
